CLAIMS

1. A lithium polymer battery including: a positive electrode comprising a lithium-containing complex oxide; a negative electrode comprising a material capable of absorbing and desorbing a lithium ion; and a separator comprising a liquid organic electrolyte and a host polymer retaining said organic electrolyte;

wherein said host polymer is a crosslinked copolymer, which has a main-chain comprising a vinylidene fluoride unit, and a side-chain comprising an alkylene oxide unit and at least one of an acrylate unit and methacrylate unit.

- 2. The lithium polymer battery in accordance with claim 1, wherein the content of said side-chain in said copolymer is 1 to 30 wt%.
- 3. The lithium polymer battery in accordance with claim 1, wherein said side-chain is composed of polyethylene glycol diacrylate or polyethylene glycol dimethacrylate, said diacrylate or dimethacrylate having an average molecular weight of 300 to 1,600.
- 4. The lithium polymer battery in accordance with claim 1, wherein at least one of said positive electrode and negative electrode contains a binder comprising a modified polyvinylidene fluoride having an oxygen-containing group.
- 5. The lithium polymer battery in accordance with claim 1, wherein said positive electrode contains a binder comprising a modified vinylidene fluoride-hexafluoropropylene

copolymer having an oxygen-containing group.

- 6. The lithium polymer battery in accordance with claim 1, wherein said negative electrode contains a binder comprising an ionomer which contains at least one of an acrylate unit and methacrylate unit.
- 7. The lithium polymer battery in accordance with claim 1, wherein said negative electrode contains a binder comprising a particulate rubber containing an acrylonitrile unit, a styrene unit and a butadiene unit.
- 8. A method for producing a lithium polymer battery including:
- (1) a step of preparing an electrode assembly by laminating a positive electrode and a negative electrode while interposing therebetween a copolymer, said copolymer having a main-chain comprising a vinylidene fluoride unit and a side-chain comprising an alkylene oxide unit and at least one of an acrylate unit and methacrylate unit;
- (2) a step of housing said electrode assembly in a battery case, and then introducing a polymerization initiator for said copolymer and a liquid organic electrolyte therein and sealing said battery case; and
- (3) a step of forming a separator between said positive electrode and negative electrode by heating said sealed battery to crosslink said copolymer and make the crosslinked copolymer retain said organic electrolyte.
